

# EVC 002: Coast Banksia Woodland

## Species List

opportunity » growth » lifestyle

Structure:	Open woodland to 25 metres with mid-storey shrubs and ground storey herbs, grasses and sedges.
Environment:	Deep alkaline sand, sandy flats and secondary or tertiary dunes
Pre-1750 distribution:	Locally extensive in Seaford and Frankston coastal areas
Present distribution:	Greatly reduced, now largely confined to foreshore reserves e.g. Seaford Foreshore, Kananook Creek
Status:	Vulnerable
Notes:	Distinguished by dominance of Coast Banksia <i>Banksia integrifolia</i> . The presence of fire-retardant succulent scramblers and creepers may protect Banksias from fire damage; this community develops from Coastal Dune Scrub in the long absence of fire; intact understorey is rare.
